

What does the company do?

A professional baseball team that has the distinction of winning a World Series championship every year they qualified for the postseason, doing so in 1997 and 2003 — both times as the National League wild card team.

What does CSSI do for them?

CSSI will be implementing an Accounts Payable workflow for Non PO invoices that will integrate directly into Microsoft Dynamics GP. The workflow is designed to be extremely flexible in the approval process, so an approval matrix by department will be built to determine the flow of documents. This provides the flexibility for the AP processor to select the approvers and is not limited to a certain number of departments or approvers who have to touch the document. The solution will also include the CI Desktop product to show archived data while browsing within GP as well as other standard CI Workflow features such as Conversations, Check Updates, and Email notifications.

How do we make their life easier?

CSSI was able to meet the needs of the organization without customizing our product. CoreIntegrator empowers the organization to utilize their current approval process without making any organizational shifts. This is a key element to employee adoption of any product and helps with employee adoption of the new process. In turn, the organization is also helped by streamlined operations and improved accuracy of the ERP data that they rely on to run their business. Just think, the next time the organization is looking to sign that highly prized free agent or are making a run for the World Series, CoreIntegrator Workflow is assisting behind the scenes to make that happen!
