

## Why 2020 is the Right Year to Upgrade to **HONEYWELL'S CK65 MOBILE COMPUTER**

The BANG that will kick off 2020 is the sound of the last nail in the coffin for legacy Windows® operating systems and the end of support for data collection devices running on them. It's time you had a plan in place to migrate your devices and solutions to Android™. There's one device in particular that will help smooth out your transition, while serving as the lynchpin for your current and future solutions, while helping put you on the road to better accuracy and greater productivity: the **CK65 Mobile Computer from Honeywell!**

- Extending the popular ergonomic design of the CK3X/R model, the CK65 Mobile Computer takes the best and makes it even better.
- The CK65 device provides future-proof investment protection with support from Android O through Android R, plus additional security updates after Google's last patch.
- The large touchscreen with a 38-key numeric keypad with function keys or 51-key alphanumeric keypad supports both legacy key-centric and newer touch applications.
- It's built on Honeywell's Mobility Edge™, an integrated hardware and software platform that lowers certification, deployment, and support costs, while ensuring application portability across all devices in the Mobility Edge™ family.

### Why **CSSI Technologies** is the Right Choice to get You from Windows® to Android™

CSSI Technologies can help you with your Windows to Android migration by delivering a smooth and painless transition, while easing the pressure off your IT team. We can create a custom solution for you built on the Honeywell Mobility Edge™ platform and Android that's flexible, scalable, and adaptable to you future needs. Contact us today, and let's start your migration with a custom demonstration!
